Solix Partners with TransSys Solutions to Deliver Enterprise Archiving and Data Lake for Advanced Analytics

TransSys Solutions, a leading digital transformation solutions partner with strong presence in ECEMEA and ASEAN regions to distribute Solix Common Data Platform and Solix EDMS

June 05, 2018 — Santa Clara, Calif. — Solix Technologies, Inc. (www.solix.com), a leading big data application provider for empowering data-driven enterprises, today announced a partnership with TransSys Solutions (<https://www.transyssolutions.com>), an Oracle Cloud Select Platinum Partner and global consulting and technology services company, to provide comprehensive data management and archiving solutions.

TransSys Solutions will offer the Solix Common Data Platform and Solix Enterprise Data Management Suite (EDMS) to its customers, providing support for enterprise archiving, data lake, application retirement, and advanced analytics on low-cost Apache Hadoop.

According to the April 2018 Forrester report, Now Tech: Big Data Fabric, Q2 2018, *“Business users want real-time integrated data from various data sources, including legacy data, social media, sensor data, and weblogs, so they can make accurate business decisions. However, the gap between business expectations and the challenges of supporting technologies in a big data platform has become the primary motivation to innovate with a big data fabric architecture.”*

Apache Hadoop is an ideal common data platform for big data applications because it offers low-cost bulk data storage and advanced analytics applications on an enterprise scale. By processing large data sets in parallel on commodity hardware, Apache Hadoop is able to reduce infrastructure costs up to 50 times for nearly any workload.

“With continued growth of systems, organizations in the region need to adopt strong data management technologies to both optimally manage the data and extract valuable information and intelligence out of them. Our partnership with Solix intends to help customers in the region adopt the robust and comprehensive solutions of Solix in the space of Enterprise Data Management. The selective list of partner solutions that we at TransSys represent is built on our understanding of the customer’s needs in the region and the strategic advisory role we are expected to play” said Prabu Balasubramanian, Executive Director of TransSys.

“Our partnership with TranSys will empower enterprises within the greater MEA regions with a common data platform,” said Sai Gundavelli, Founder/CEO, Solix Technologies. *“We look forward to working with TransSys and its customers.”*

The Solix CDP is cloud-ready software. Key capabilities include:

- **Object Workbench:** Uniform data collection of structured and unstructured data, ETL and metadata repository.
- **Data Governance Workbench:** Sensitive data discovery, data masking and encryption, role based access control, retention management, ILM, GDPR, PHI, PCI and FISMA compliance frameworks
- **Analyst Workbench:** Data preparation, data visualization, search, business intelligence and analytics
- **Enterprise archiving and data lake:** Real-time data hub architecture for scalable processing with low cost bulk data storage
- **CDP API 1.0:** Certified API support for Solix App Store solutions
- **S3 storage support:** API support for Amazon S3 (Simple Storage Service).
